Acknowledgements

This guide is the output of a Millennium Forest for Scotland Award Scheme completed by the author in late 2000 and early 2001. Thanks are due first to the Forestry Commission for giving time to do perhaps half the work in office hours. The author wishes to thank the Millennium Award scheme staff, particularly Ernest Law, who I think would have quite liked to have done this project himself, if he were not so busy administering two hundred other schemes! Thanks also to Penny Cousins for continuing to be such a driving force in the world of native woodlands; and to my mentor Toni Clark - the project was so rushed we never did get round to meeting up! To Q5 Computers Oban (no relation!) for supplying excellent computing equipment, and Webster's Photographic Shop, Oban, for helping me from scratch with the purchase of a digital camera.

Also to Jamie McIntyre, Sunart oakwood project, for sending me my first Jpeg of a veteran tree two years ago, when I could not even work out how to save it or print it! In similar vein thanks to Jo Lenthall who worked with me on a similar project, but I was not talking the same computer language at that time, nor could I get a Zip disc read for about a month!

The other acknowledgements are all to people in the field of ancient woodlands and fellow collaborators in the wood pasture saga. Especially the current team of Kate Holl and Helen Gray of SNH who are providing funding for Mike Smith to carry out a survey of the resource. Mike and I have been bouncing aspects of wood pasture off each other now for a couple of years and it is a very productive working relationship. Mike's colleague Kenny Bean gave me the print used in the bird cherry layering photo. Other collaborators include Neil Sanderson, Richard Smithers, Jane Begg, Keith Kirby and Bob Bunce. Also Ted Green, Neville Fay and all the other guys in the Ancient Tree Forum who gave a lot of encouragement in their recent visit to Scotland.

veteran trees and wood pasture!

Also a special mention to Carl-Adam Haeggstrom of Helsinki University (seen on the left beside one of his favourite veteran trees on Aland), who is the keenest person I know on the subject of fodder pollards and their restoration – and he is truly international in his knowledge. In 1999 I was fortunate to be able to visit the nature reserve in Nato beside the university field station which he and his wife Eeva help run, near Mariehamn, Aland Isles. Along with Jane Begg, Una Urquhart, and Charles Critchley we were able to study pollard meadows and their fantastic floral richness at first hand.

Many thanks to Chris Smout and Fiona Watson who have done so much for Scottish woodland history in recent years, and particularly for their patience in dealing with us veteran tree enthusiasts. They have been instrumental in setting up the Scottish Woodland History Discussion Group, whose discussion has contained an inordinate amount of time on

Two genial collaborators are Brian and Sandy Coppins, the lichenologists, who share ideas with me on pollards, natural hazel, wood pastures and theories of origin of these things, and Brian has such patience with my lichen IDs! To Sid Clarke, photographer colleague of Brian at the Royal Botanic Garden, Edinburgh who I persuaded to take a slide of old pine in Abernethy (*page 34*) as a change from lichen close ups. Also for being an inspiration through the quality of his own books – one day maybe my images will get to that standard? [*Dream on PQ...ed.!*]

Finally to Linda my wife who has more patience than all those above put together! This time work has really invaded home life, with a computer now installed in a new office in the house!
